

ECOCHANGE MOVEMENT

SMART WASTE MANAGEMENT

Turning Our Trash Into Treasure

FOCUS POINT

illegal dumping and improve recycling by introducing smart community recycling stations

THE PROBLEM

- Illegal dumping in open spaces, rivers, and roadsides
- Overflowing bins and irregular waste collection

Low recycling participation and the health of the community

WHO IT AFFECTS

*Households,informal settlements
Schools and young people

SOLUTION

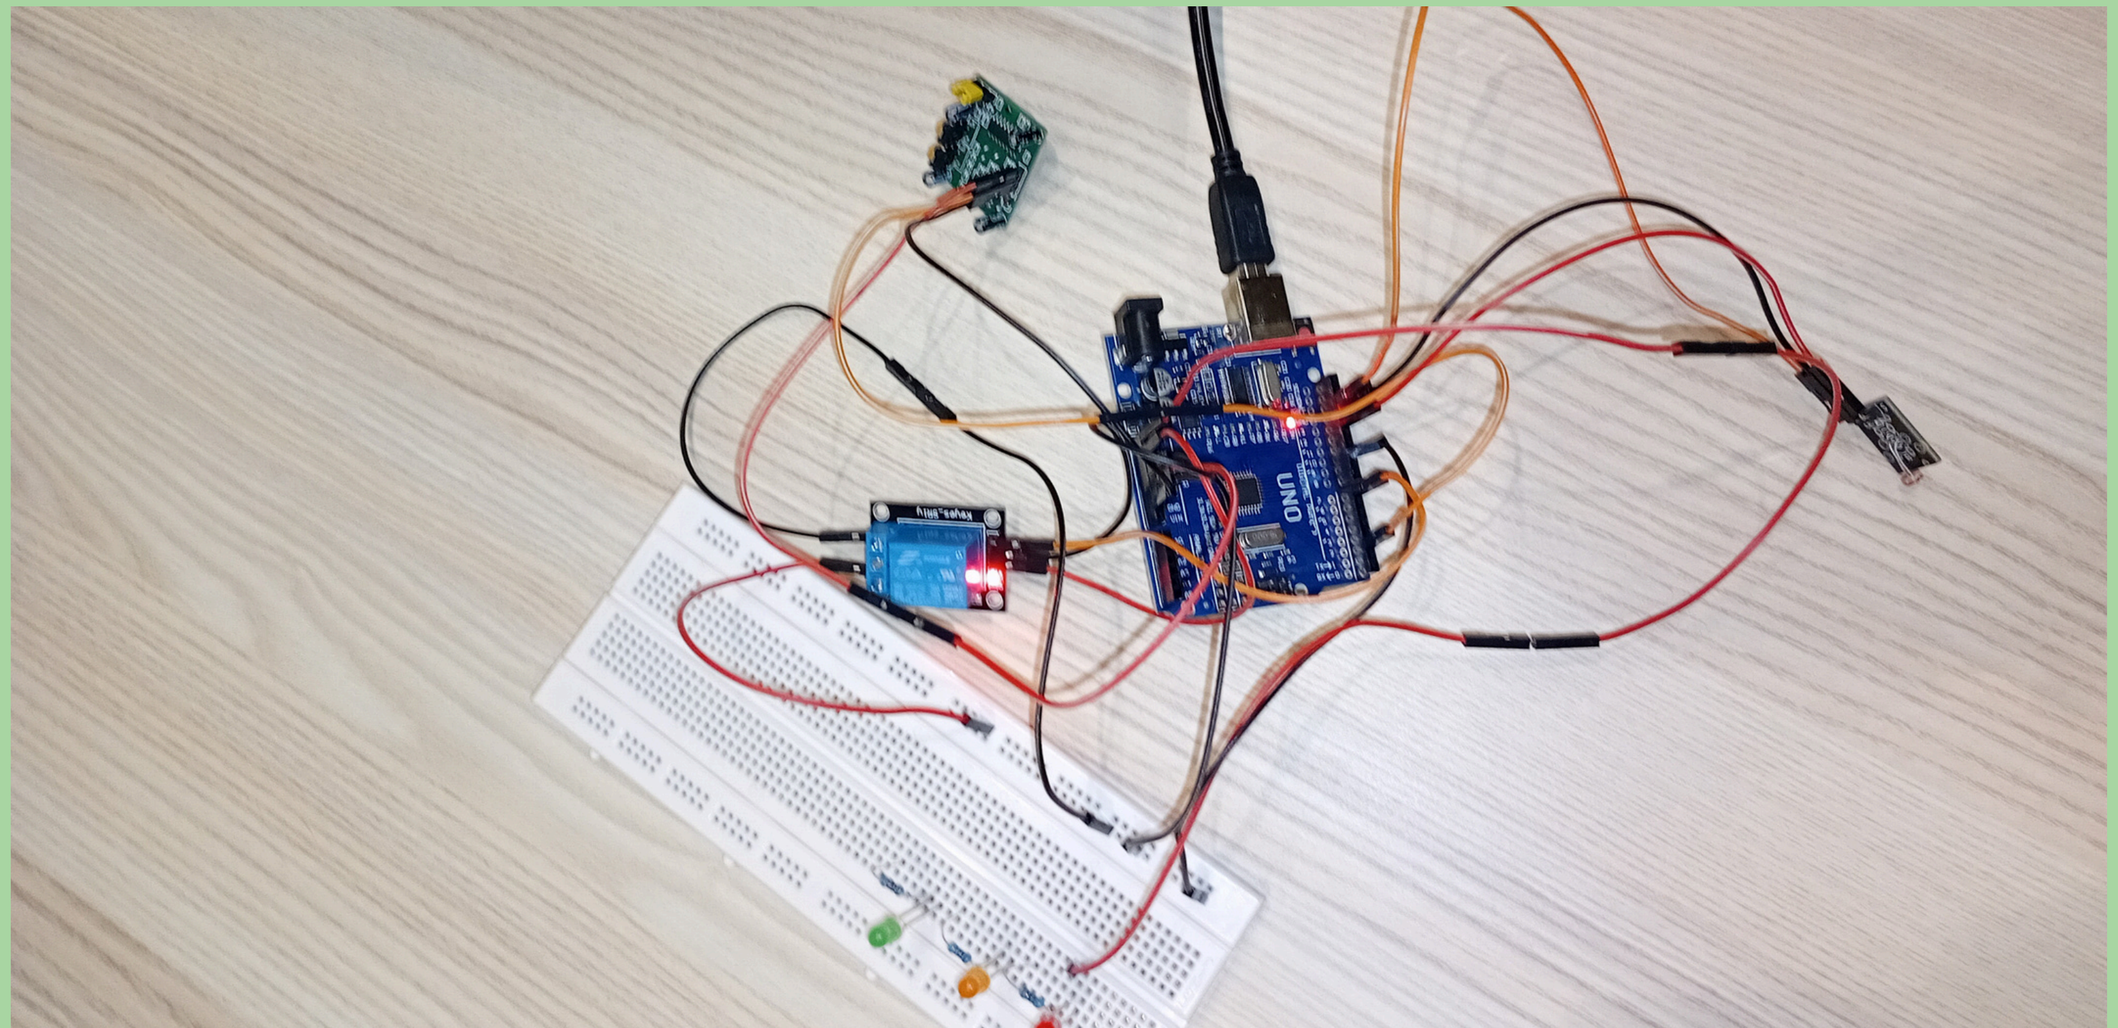

EcoChange Movement proposes a network Of solar-powered smart recycling stations for high- waste locations.

HOW IT WORKS

Residents deposit waste Waste is separated by category Sensors measure bin capacity Controller processes sensor data Mobile network sends data to dashboard Collection team receives an alert Recyclables are collected and delivered to recycling partners

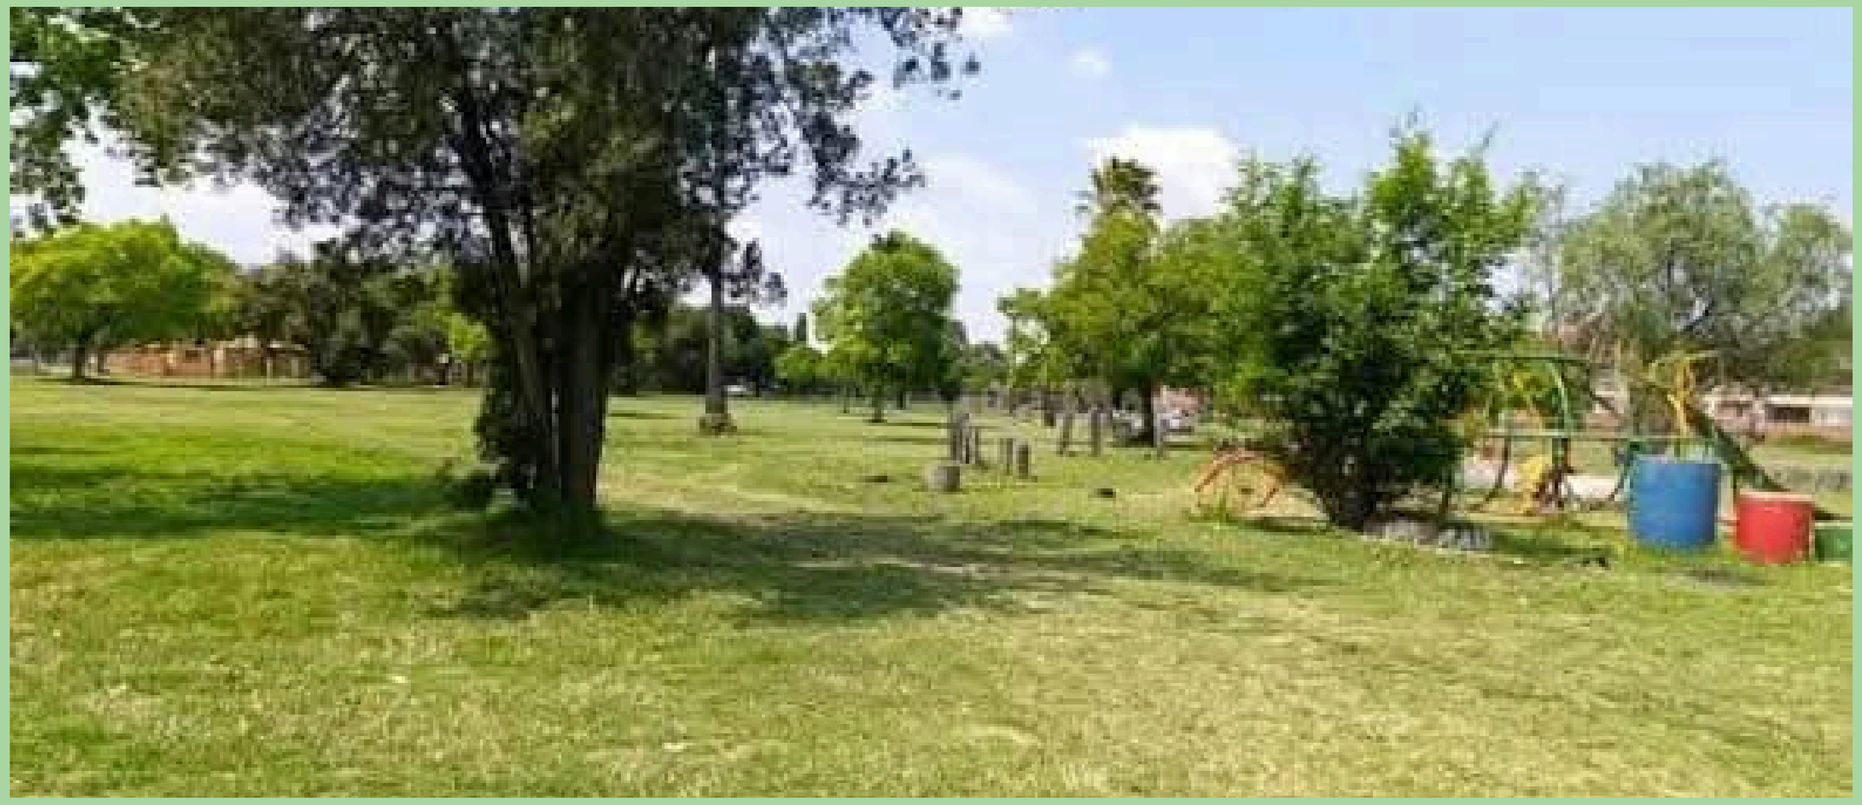

BASIC CIRCUIT

6. DEMONSTRATION

Correct separation of recyclable materials Accurate fill-level readings Successful transmission of data Timely collection notifications A simple and accessible user experience

IMPACT

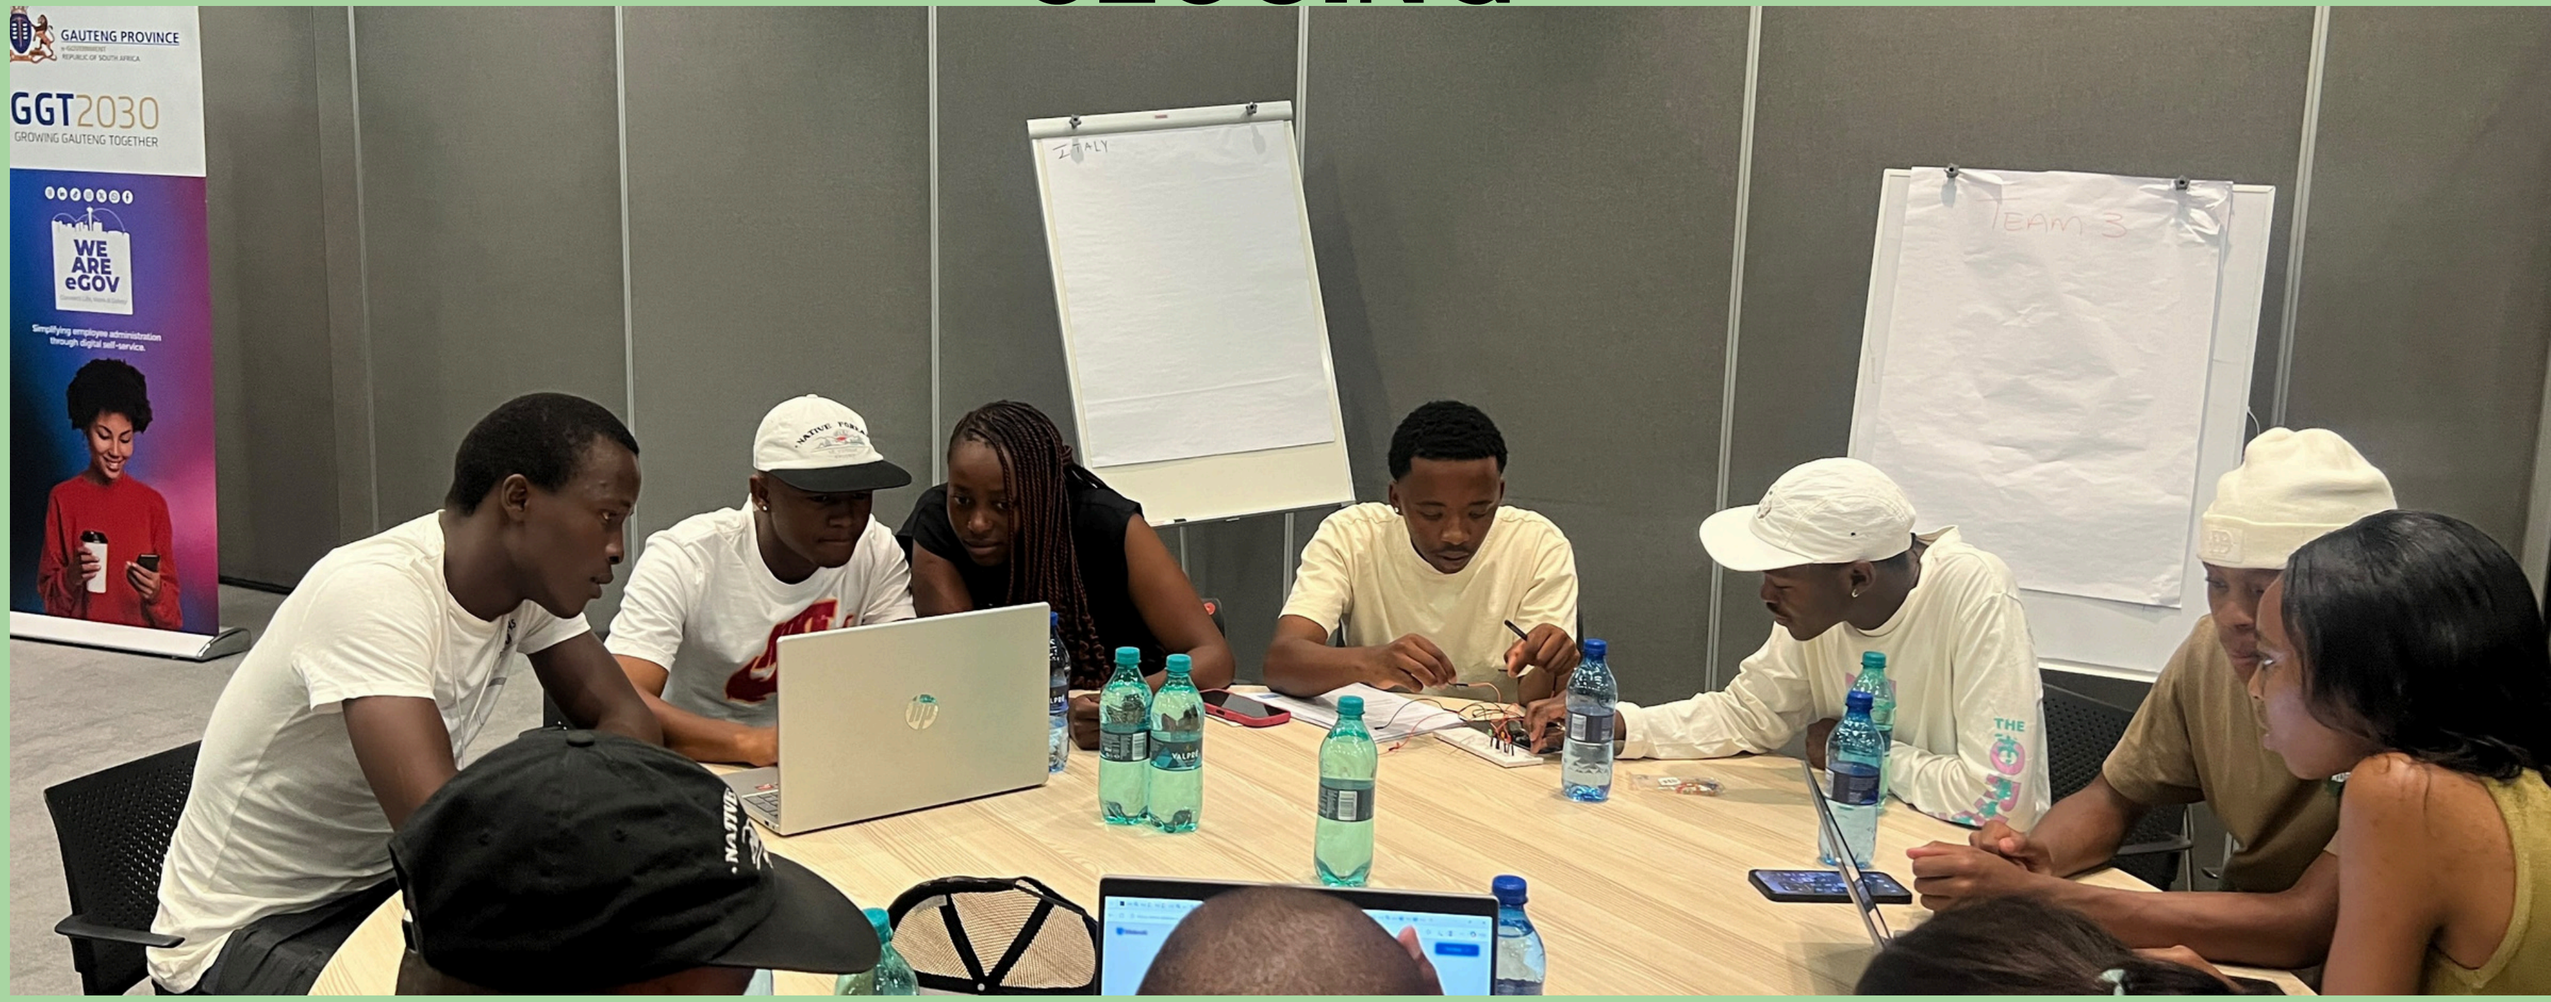

The project can create environmental, social, and economic benefits.

OPERATING COST

Expected costs include connectivity, maintenance, transport, cleaning, repairs, and incentive rewards.

ESTIMATED COST: R33 000

CLOSING

EcoChange Movement aims to make waste management more effcient, inclusive, and sustainable while protecting Sedibeng's communities and natural resources.
